

XRD Analysis Results

Roman Coin (Denarius)

The SciArt Project
2024

Results Report

Point of Interest 1: Main body of the coin, collected from the edge

Here is the XRD pattern of the main body of the coin.

The analysis of the diffractogram confirms that the coin is mainly made of silver.

Point of Interest 2: Relief

Here is the XRD pattern of the red traces collected from the coin's relief.

The analysis of the pattern does not lead to any conclusions, other than suggesting it is likely an organic material.
