Results Report

Point of Interest 1: Green painting layer

We study the cross section of the sample we collected from Point of Interest 1. The SEM image of the cross section confirms that we have several painting layers, the surface green is the one shown on the top that is highlighted by the yellow arrow.

We can select some points to proceed with our analysis.

Point of Interest 2: Wood from the plywood

The SEM image of the wood sample from the plywood highlights its micromorphology and microstructure. Inside the large grooves called tracheids we can observe round formations (like the one indicated by the arrow) that are called pits. The above are characteristics of wood from coniferous trees.
