Clay lamp

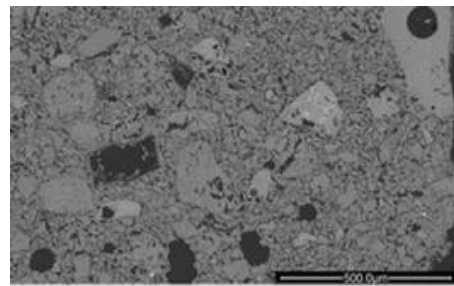

The SciArt Project
2024

Results Report

Point of Interest 1: Main body of the lamp

We are studying the sample we collected from the main body of the lamp.

In the image we obtain from the SEM, we observe various formations with different shades of gray, indicating that the sample is heterogeneous and consists of various materials.

X200

Point of Interest 2: Residues on the spout of the lamp

The SEM image of the sample we collected from the lamp's spout shows that it is homogeneous. From its morphological characteristics, no conclusion can be drawn about what the residue might be.
