Results Report

Point of Interest 1: Blue painting layer

This is the cross section of the sample we collected from Point of Interest 1.

The magnification of the cross section confirms that we have a blue surface layer that consists of blue grains.

The magnification is not enough to get clear results.

Point of Interest 2: Potato sac

The magnified picture of the textile shows that it is composed of textile threads, and the threads are composed of fibers.

The level of magnification is not enough to have more information about the origin of the fibers.
